

Modulating heat pump, for indoor and outdoor installation, for the production of hot water up to 65 °C (70 °C for DHW). Guarantees more than 169% efficiency, thanks to the use of ground source renewable energy.

# Condensing gas absorption heat pump + ground source renewable energy for heating GAHP Line GS - RTGS Series

## Advantages

- Up to 40.9% utilisation of ground source renewable energy, exceeding peak efficiencies of 169% and guaranteeing up to 40.9% reductions in annual heating costs and in CO<sub>2</sub> emissions compared to condensing boilers.
- It permits a considerable promotion of the building's energy classification with the consequent increase in the value of the building.
- All data are tested by certificates and approvals from ENEA for Italy, DVGW-Forschungsstelle and VDE for Germany, California Energy

Commission for USA.

• Reduction in investment costs for geothermal loops can be higher than 50% in comparison to EHP.

- Its polluting emissions are lower than the limits set by the Blue Angel certification (www.blauer-engel.de).
- In case of contemporary use, external sources are not required, thus reducing installation and operational
- costs.
  It reduces electricity consumption thanks to the prevalent use of gas.
- With a GAHP-GS, every year
   5.1 Tons of CO<sub>2</sub> emissions are saved, which are equivalent to

those absorbed by 714 trees or those produced by 2 green cars; every year 2.2 TOE are saved.

 The installation of ground source gas absorption heat pumps is supported by national and local incentive programs.

### Applications

- Ideal for heating industrial, commercial, accommodation and tertiary utilities in geothermal applications.
   Ability to supply cooling as free-cooling mode (unit off) or in geothermal applications with active cooling (unit on).
- For outdoor and indoor installation.

#### Versions

- HT: for the production of water at high temperature
- (retrofitted radiator systems);
- LT: optimized to produce hot water at low temperature (new systems with radiant panels or fan coils).

With GAHP-GS absorption heat pump reduction in investment costs for geothermal loops can be higher than 50%. The actual length of the probes depends on the ground and conditions of use.
